

Having invented and patented the world’s first 3D-printed Reef Tile made from clay, Archireef restores coral substrates and delivers a coral survivorship of 4x when compared to conventional coral restoration methods.

Geneva Inventions
Gold Medal Winner 2022

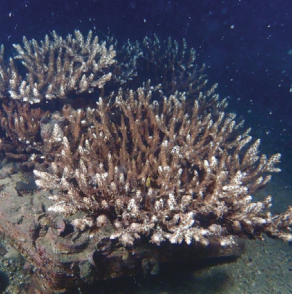

Energy Globe Award
Water Category Winner 2022

Results

 Hong Kong

260%
average increase in coral growth during the first 3 years post-deployment

 Abu Dhabi

620%
increase in fish abundance compared to nearby unrestored seabed

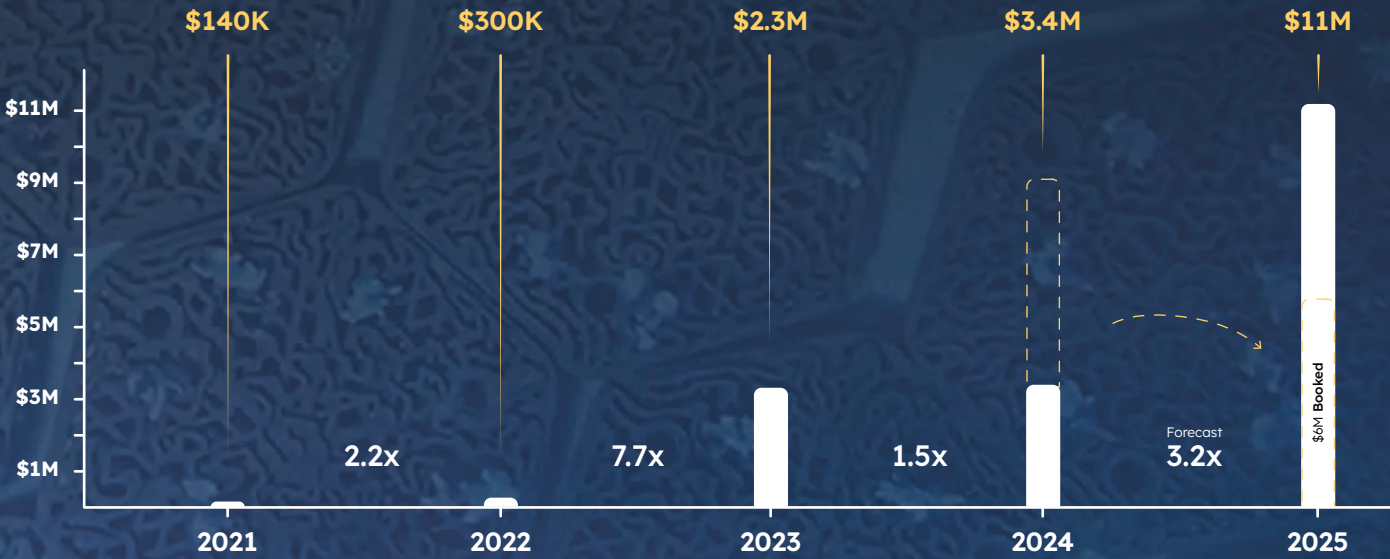

95% coral survivorship

Business

Our business model is **B2B** – we sell our product based on deployment size and charge a set-up fee. Our clients then enter a subscription period of multiple years during which we deliver monitoring and reporting – our clients use the reports for ESG and environmental compliance.
